New vaccine compositions are described which comprise a Streptococcus pneumoniae polypeptide (or fragments) of 80 - 680 amino acids in length that comprise at least one histidine triad residue (HxxHxH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising antibodies to is useful for passive immunization for treating pneumococcal infections which includes otitis media, nasopharyngeal

CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as CC ABS56454. Also included are an antibody which binds one of the CC proteins, treating a patient by administering the protein, DNA or CC antibody (in a composition), a kit comprising first and second primers, CC which are the nucleic acid cited above or fragments between nucleotides CC which are the nucleic acid cited above or fragments between nucleotides CC where the first primer is substantially complementary to the target complement of the target sequence, and the second primer is substantially complementary to the target CC emplement of the target sequence, and where the parts of the primers CC having substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound CC with the protein, and determining whether the test compound CC sequence to be amplified, assay comprising contacting a test compound CC mucleic acid molecules, antibody and compositions are useful as CC mucleic acid molecules, antibody and compositions are useful as CC medicaments for treating on preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumoniae, sepsis, otitis media or ear infection. They are also useful for CC the 2489 identified coding region from the genomic sequence.

                                                                                                                                                                                                                                                                                                                                                                                                      Although a number of proteins have been suggested as being involved in the pathogenicity of Streptococcus pneumoniae, there still remains a need to identify polypeptides having epitopes in common from various strains of S. pneumoniae in order to utilise such polypeptides in vaccines to protect against a wide variety of S. pneumoniae. New vaccine compositions are described which comprise a Streptococcus pneumoniae polypeptide (or fragments) of 80 - 680 amino acids in length that comprise at least one histidine triad residue (HxxHxH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising antibodies to is useful for passive immunization for treating pneumococcal infections which includes otitis media, nasopharyngeal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC proteins, treating a patient by administering the protein. DNA or CC antibody (in a composition), a kit comprising first and second primers, CC which are the nucleic acid cited above or fragments between nucleotides CC 8-100 of a sequence not defined in the specification, for amplifying a CC target sequence contained within a Streptococcus nucleic acid sequence, CC where the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers CC complement of the target sequence, and where the parts of the primers CC thaving substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound CC with the protein, and determining whether the test compound binds to the genes encoding the proteins has been rendered inactive. The proteins, CC nucleic acid molecules, antibody and compositions are useful as CC medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as gneumonia, CC sepsis, otitis media or ear infection. They are also useful in developing CC vaccines, diagnostics and antibiotics. The methods are useful for identifying immunodominant proteins. The present sequence is the CC of the printed specification, but was obtained in electronic.
                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                   CC The present sequence encodes a protein from Streptococcus pneumoniae.
CC The nucleic acid sequence encoding the Streptococcus pneumoniae protein
CC can be useful in vaccines for inducing protective antibodies against
CC Streptococcus pneumoniae, for treatment or prevention of infection e.g.
CC pneumonia, otitis media or meningitis. Probes based on the nucleic acid
CC are used to detect Streptococcus infection (by usual hybridisation or
CC amplification methods), also for isolating Streptococcus genes or their
CC allelic variants. The protein can be used similarly to detect specific
CC antibodies in standard immunoassays, especially for diagnosing or
CC monitoring infections. Antibodies which bind the protein are used to
CC detect corresponding antigens, to purify the protein and for passive
CC immunisation (optionally coupled to a toxin). Vaccines are administered,
CC e.g. by injection, orally or through the skin, typically at 0.01-1000
CC (especially 10-300) mu g/ml per dose.
                                                                                                                                                                                                                                       Query Match

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading frawhich are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Streptococcus pneumoniae antigens, useful for detecting Streptococcus and for preventing or attenuating disease caustreptococcus infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2002-479261/51
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CHOI G H.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae BVH-11-2 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcus infections. This sequence encodes the Streptococcus pneumoniae protein BVH-11-2, used to create the antigenic peptides described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment omeningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for

This DNA sequence encodes a 79 kDa protein (see AAY05753) of Streptococcus pneumoniae serotype 4 that is capable of degrading human complement protein C3 (HCPC3). It was identified in the S.

Claim 54; Page 52-54; 66pp; English

New isolated human complement C3-degrading

proteinase

                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pneumoniae serotype 4 genome by alignment to another novel open creading frame (see AAX2533) that codes for a 20 kDa HCPC3 protease C (AAY05752) of S. pneumoniae serotype 3. This suggested the open reading frame that codes for the 20 kDa protein may be part of a clarger open reading frame. Amino acids 1-58 and 90-132 of the 20 kDa protein have substantial sequence identity with amino acids 170-227 and 258-300 of the 79 kDa protein. Proteins and peptides or polypeptides containing these regions, and DNA sequences encoding them (nucleotides 507-681 and 827-99) of the present sequence) are claimed. HCPC3 proteases and polypeptides can be used as immune system stimulating compositions (claimed). They can produce an immune response against S. pneumoniae to immunize or treat a mammalian subject against infection or colonization (claimed). They can produce a B cell response, a T cell response, an epithelial cell response or an endothelial cell response of an animal used in xenotransplantation can be used to inhibit C3-mediated inflammation and rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the streptococcus pneumoniae genome g
                                                                           The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID No:1 to 391 (AAV52134 to AAV52524) recorded on it, or a representative fragment or a sequence at least identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted is SEQ ID NO:1 to 391 (AAV52334 to AAV52524) are genomic fragments from
                                                                                                                                                                                                                                      Claim
                                                                                                                                                                                                                                                                                      pneumoniae
                                                                                                                                                                                                                                                                                                              Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays pharmaceutical compositions and vaccines for Streptococcus

```
nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SRQ ID NO:1 to 391, identifying members of the SRQ isolating the nucleic acid molecules from the members; or (b) isolating the nucleic acid molecules from the members; or (b) isolating CRNA, DNA or CDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and

Rioux Q Charland z

against Ø ġ meningitis,

The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae NEW12 protein antigen. T; 0 other;

Score 548.4; DB 21; Pred. No. 5.3e-128; 432; Indels Length 102; Gaps 2

CC The nucleic acid sequence encoding the Streptococcus pneumoniae protein

CC can be useful in vaccines for inducing protective antibodies against

CC Streptococcus pneumoniae, for treatment or prevention of infection e.g.

CC pneumonia, otitis media or meningitis. Probes based on the nucleic acid

CC are used to detect Streptococcus infection (by usual hybridisation or

CC amplification methods), also for isolating Streptococcus genes or their

CC allelic variants. The protein can be used similarly to detect specific

CC antibodies in standard immunoassays, especially for diagnosing or

CC monitoring infections. Antibodies which bind the protein are used to

CC detect corresponding antigens, to purify the protein and for passive

CC immunisation (optionally coupled to a toxin). Vaccines are administered,

CC e.g. by injection, orally or through the skin, typically at 0.01-1000

CC (especially 10-300) mu g/ml per dose.

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading frawhich are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

                                                                                          The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae BVH-3A protein antigen.
                                                                                                                                                                                                                                                                                                                              Streptococcal antigens useful for vaccinating against otitis media, bacteremia and/or pneumonia -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptococcus pneumoniae; BVH-3; BVH-11; BVH-28; antigen; vaccine; prophylaxis; therapy; infection; diagnosis; meningitis; bacteraemi otitis media; pneumonia; immunisation; bactericidal; ds.
